how to make model

- Cut out the red rings and arrange in order as shown by diagram a.
- Cut 29 fixing tabs and fix to red rings as indicated in diagram a.
- There are 2 fixing points on a ring; fix tabs so the vertical elements are at 90 degrees to each other.
- For added support, there is only one fixing point to stick 2 tabs together to create a 2-sided rectangular box.
- If the fixing box is infilled red, this indicates a fixing point underneath.
- The numbers on each disk correlate to the diagram.
- Once you have done this, try creating your own biomorphic shape.
